

2. Create a script called s1 that calls another script s2 where:
- In s1 there is a variable called x, it's value 5
 - Try to print the value of x in s2 by two different ways.

```
File Edit View Search Terminal Help
```

```
[magedKh ~/Scripts] ./s3.sh  
First way using s3.sh: x= 5  
[magedKh ~/Scripts] ./s2.sh  
Second way using s2.sh: x= 5  
[magedKh ~/Scripts]
```

8. Create a script called myinfo where:
- It asks the user about his/her logname.
 - It print full info about files and directories in his/her home directory
 - Copy his/her files and directories as much as you can in /tmp directory.
 - Gets his current processes status.

```
[magedKh ~/Scripts] ./myinfo.sh
Enter your logname: ma
user not found
[magedKh ~/Scripts]
```

```
[magedKh ~/Scripts] ./myinfo.sh
Enter your logname: maged_khaled
